

NO-ONE UNDERSTANDS CHIMNEY FLASHING LIKE WE DO

Keith, the owner, personally manufactures and installs each chimney cap by hand. Each chimney cap is hand crafted and mechanically air riveted together in our in house fabrication shop. We use painted 24 and 26 gauge galvanized flat sheets and lay out and graph the design of your new chimney cap by hand. Then we put the metal in our slitter machines and cut each piece to size. Then it all goes into the metal break to form each piece appropriately. Next it all goes to the assembly table where each piece gets mechanically air riveted together.

The galvanized zinc coated bird screen comes standard on each chimney cap, or the upgraded 1/2" expanded metal screen is also available for enhanced durability when keeping unwanted wild life from breaking in to nest in your chimney cap.

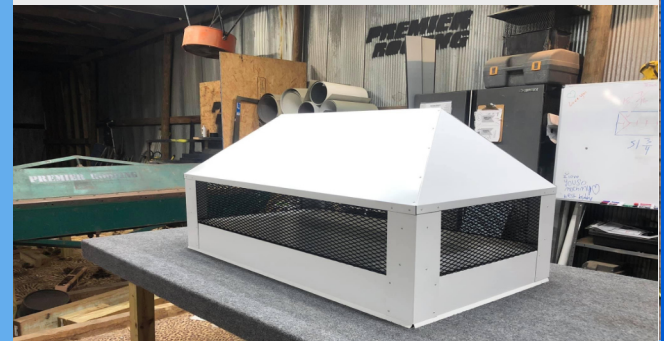

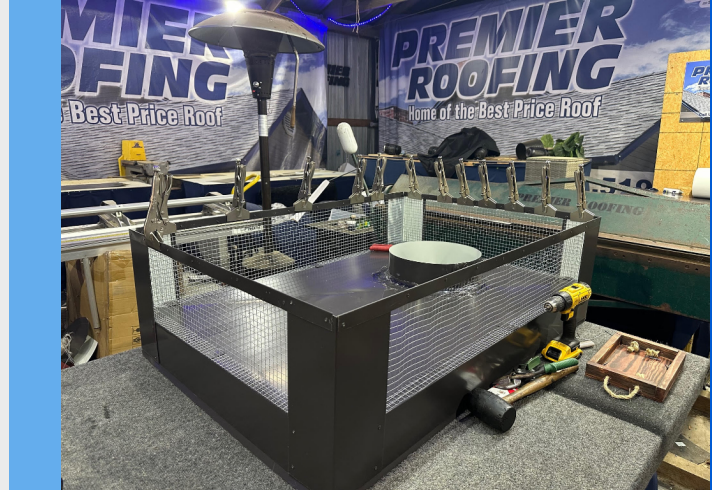

Last, Keith personally installs each cap himself to ensure a perfect fit and backs it up with a life time warranty.
